

**Jacob Wilhelm** LEED AP BD+C | Architect

Jacob has been practicing architecture in Colorado since 2017, bringing an appreciation for both natural and urban contexts to the spaces people live and work. His professional experience ranges from expansive housing masterplans to international luxury resort developments. Solving for the economic and livability concerns of mountain and remote regions has been central to each and every project he has directed design of.

Beyond professional practice, he has published independently and for NCARB on the topics of post-occupancy evaluation, building performance, and wellness within the built environment. Most recently, this includes Adaptive Architecture: Changing Parameters and Practice (Routledge 2018) and Architecture and Health: Guiding Principles for Practice (Routledge 2019). Both as an individual and working collaboratively with other disciplines, he has been awarded in design competitions sponsored by Arizona Residential Architects, the Scottsdale Museum of Contemporary Art, Arizona State University, and more. Additionally, he is a lecturer in the MArch program at the University of Colorado's College of Architecture and Planning. He is committed to expanding architectural discourse through interdisciplinary thinking, research, and theory, specifically around local vernaculars and future trends.

Bachelor of Science in Architectural Studies, Arizona State University
